

# Hand-Operated Washing Bucket Instructions

## How to Use:

1. Place the metal handled bucket with holes (washing bucket) into the bucket without holes (capture bucket).

2. Fill the washing bucket about halfway with your dirty clothing or materials.

3. Add soap to the washing bucket (recommended  $\frac{1}{8}$  cup of liquid detergent, preferably biodegradable).

4. Add water to the washing bucket until the water is about three inches above the clothing/material.

5. Place the plunger into the washing bucket with the water, soap and clothing/material.

6. Place the lid over the bucket, sliding the plunger handle through the metal hole in the lid.

7. Close the lid tightly and vigorously plunge the clothing/materials with the water and soap for 5 to 10 minutes, or until you feel the clothing/materials are clean.

8. Once clothing is clean, remove the lid and plunger from the bucket and gently lift up the washing bucket with the clothing/materials inside, letting the water drain into the capture bucket while lightly shaking and \*turning the washing bucket to drain excess water.

9. Discard the washing water that is in the capture bucket.

10. Place the washing bucket back into the capture bucket and fill with water again until it is about three inches above the clothing/materials.

fill water to about here

clothing

11. Vigorously plunge the clothing/materials until they have been thoroughly rinsed, then repeat step 8.

12. Ring out excess water from the clothing/materials over the capture bucket and hang clothing/materials up to dry. Repeat this step until all clothing/materials are hung up. Repeat step 9.

\*For your own safety, do not excessively twist the washing bucket. We recommend using two hands to drain the washing bucket and gently shake out excess water in order to prevent injury to your wrists and arms.
